

Why Do Some Get Sick?

You know Thomas Edison invented the light bulb. But who discovered chiropractic - and *why*?

Over a hundred years ago "patent medicines" with active ingredients like alcohol and cocaine flourished. In the midst of this, healer, experimenter and freethinker Daniel David Palmer in Davenport, Iowa asked a simple question:

"I desired to know why one person was ailing and his associate eating at the same table, working in the same shop was not. Why? What difference was there in the two persons that caused one to have pneumonia, catarrh, typhoid or rheumatism, while his partner, similarly situated, escaped? Why?"

This was a groundbreaking way of framing the question about health. Germs alone couldn't be the cause of disease, otherwise everyone would get sick. Chiropractic came into existence soon after D.D. Palmer discovered that it's smarter to look at the person with the disease, than the disease in the person. Revolutionary then - and revolutionary now!

The Art of Chiropractic

I'm often asked how we create a care plan - how many visits and how frequent should they be. This is where experience and the "art" of chiropractic come into play.

During the exam, your condition, your age, lifestyle, attitude and dozens of other factors are evaluated, recorded and compared with similar cases. Each plays a role in the recommendations I make for the first phase of your care.

A plane needs enough speed to take off. So too with our initial recommendations: If the visits are too far apart, we won't create enough momentum to reverse the downward trend. If the visits are too frequent, the body doesn't have enough time to put the adjustments to use. There's a real skill - and art - to picking the right balance between too frequent and not frequent enough.

Introducing Dr. You

Regardless of a doctor's specialty, the prestige of the school they graduated from or their years of experience, they can't cure headaches, mend broken bones or heal wounds. Only you can do that... *If* your healing ability isn't impaired.

Your inborn healing ability is responsible for the tremendous success that chiropractic patients enjoy. The only thing doctors can do, regardless of their discipline, is to help reduce barriers to the incredible healing ability you were born with.

Which is why all of us at Bracamontes Chiropractic Corp are interested in your nervous system. It controls every cell, tissue, organ and system of your body. The nerves along your spine are the most vulnerable part of your nervous system. By reducing nervous system compromise in your spine, Dr. You takes over and does the healing!

How does it feel to be a doctor?

How to Tell Others About Chiropractic

Chiropractic doesn't benefit from huge advertising campaigns or media coverage like those enjoyed by the drug industry.

Lucky for us, a recommendation from you is more powerful than all the advertising in the world. How can you introduce others to chiropractic? Here are a few simple ideas:

Be Confident. Know that chiropractic has helped a lot of people with all different types of health problems. A better working nervous system can help just about anyone, whatever their health current status may be.

Tell Your Story. Let friends and coworkers know how you've been helped with chiropractic care. Explain how chiropractic works and your experiences in our practice.

Answer Questions. Most people have heard myths and misconceptions about chiropractic and have a lot of questions. Simply share your experiences, which will help dispel fear of the unknown. Just as there are great and not so great dentists, it's no reason to swear off dentistry!

Ask For Help. We have some printed information we can equip you with to help answer questions that your friends and family may have. Or, have them call our practice. I'm happy to answer questions over the phone without cost or obligation.

Email A Friend. Forward any page from our website to someone you think we can help. It's a great way to offer hope and encouragement. Then, let them decide if chiropractic makes sense.

It's a great feeling when you help others. It's something we get to experience every day. You can enjoy that same great feeling too.
